PROFILE SUMMARY

Results-driven **Senior Software Engineer** with **4+ years of experience** architecting scalable **FinTech** and **SaaS** platforms. Expert in building **high-performance microservices** using **Quarkus** and **Node.js**, with deep expertise in **AWS** cloud infrastructure and **multi-tenant architectures**. Proven track record in optimizing system throughput by **85%** and delivering end-to-end solutions from **Android/React** frontends to complex backend logic.

SKILLS

Languages: Java, Kotlin, TypeScript, JavaScript, Dart.
Backend & Platform: Quarkus, Node.js, Express, REST, GraphQL, Kafka, MongoDB, Microservices, Multi-tenant Architecture.
Mobile & Frontend: Android, React Native, Flutter, ReactJS, NextJS, Vite.
Cloud/DevOps: AWS, Docker, CI/CD, Nginx, GitHub Actions.

WORK EXPERIENCE

Winmore (Lanetix) Remote
May 2026 – Present
Senior Software Engineer

- **Winmore** is a **freight-forwarding SaaS platform** syncing tender rates and lane data with **CargoWise (JAS)**; stale rate-sync logic was causing incorrect lane pricing. Rebuilt the **sync and charge-expansion pipeline** with **dynamic-mode jobs** and time-zone-safe expiration handling in **Ruby on Rails**, eliminating pricing discrepancies across active tenders.
- Client-facing admin tools ran on a **legacy jQuery frontend** slowing feature delivery. Migrated it to **React, TypeScript and shadcn/ui**, shipping a new dashboard, log-tail viewer and dark/light theming, cutting new-page build time significantly.
- Ops teams needed finer control over a dense pricing table used industry-wide. Built **admin-gated, reorderable weight-break columns** with segment grouping in **React**, promoted to production with zero rollback.
- **Stack:** Ruby on Rails, React, TypeScript, shadcn/ui, PostgreSQL, AWS (Cognito, S3), REST APIs, GitHub Actions.

Finfactor Technologies Pvt Ltd Pune
April 2025 – May 2026
Senior Software Engineer

- Architected multi-tenant **PDF parser microservices** to convert bank statements into **account aggregator (ReBIT) compliant data** using **Quarkus** and **React**, improving onboarding throughput by **85%**.
- Built backend services for **bank statement analysis** that **derive loan eligibility scores** and **sector-wise income and expenditure models** for **salaried users and SMEs**. Also implemented **exception handling** and **error logging** with integrated **channel alerts**.
- Developed an **Early Warning Signals (EWS)** platform using **expenditure trends** and **category-wise behaviour analysis** to generate **real-time risk alerts** and portfolio insights.
- Built a role-based **web dashboard** and **React Native mobile app** for lender risk analysis and borrower monitoring.
- Delivered a **multi-tenant underwriting and monitoring platform** with **AA consent management** and **analytics visualisation**.
- Engineered a resilient **event-driven architecture** agnostic of cloud providers (integrating **Kafka, SQS, GCP Pub/Sub, Azure Queue**), implementing **exponential backoff** and **retry policies** for fault tolerance.
- Implemented **Horizontal Pod Autoscaling (HPA)** on Kubernetes to dynamically scale service replicas based on load, ensuring **high availability** and **zero downtime** during burst traffic.
- Developed plug-and-play **client SDKs** in **Kotlin, Flutter, and React Native** to embed **Account Aggregator user journeys** directly into client applications.
- Built a **Model Context Protocol (MCP) Server** to power AI agents that assist client developers, significantly reducing **SDK and API integration time**.
- Designed a high-volume **event tracking service** using **Kafka** and **ClickHouse** to visualize **user journeys** and **drop-off analytics** in real-time.
- Created a **workflow automation suite** covering **Integration Testing** and **UAT**, transforming client onboarding into a **one-click operation** for support teams.

GoDeskless Inc Pune
Jan 2022 – April 2025
Software Engineer

- Architected a **white-label client analytics portal** enabling enterprise customers to monitor day-to-day operations, including **ticket lifecycle tracking, service performance, agent productivity** and **operational KPIs**. Built using **Next.js, shadcn/ui** and modular React architecture with **multi-theming support**. Delivered interactive **data dashboards, charts and operational insights** to help clients optimize service workflows and business performance.
- Built multiple **Android applications** including **Field Service, CRM and Lead Management** platforms using **Kotlin, Java, MVVM, Clean Architecture, XML UI and Jetpack Compose**.
- Implemented **live tracking, geofencing, geotagging, video calling** and **chat** features using **Google Maps, CouchDB** and **WebSockets**, increasing customer acquisition by **66%**.
- Designed and implemented a **configurable form and checklist builder system** allowing client administrators to dynamically create **custom forms, workflows and operational checklists**. Integrated across **Flutter mobile apps and web platforms**, capturing field responses and persisting structured data into **Couchbase** to power **advanced analytics, operational insights and complex data queries**.
- Developed backend services with **Node.js, Express, REST, GraphQL, SSE** and **Socket APIs**.
- Built a **React Native** and **native Android** contact-centre solution integrated with **Salesforce**.
- Delivered cross-platform mobile apps using **Flutter** and native bridges; integrated video calling using **OpenTok** (50% faster closure).
- Designed and implemented **inventory and warehouse management workflows** for field logistics, including **vehicle (asset) binding with field agents, automated pickup and drop job assignment**, and real-time task orchestration to streamline last-mile operations and improve field productivity.
- Developed a **Super Admin portal** for client onboarding, tenant management and platform monitoring; implemented **usage tracking and billing enforcement** based on **API calls, SMS, Email, Video Call minutes, Chat usage** and number of licensed users. Built dashboards with **JSChart** for data visualization along with **pagination, filtering** and analytics for operational insights.
- Worked on **AWS (S3, EC2, CloudFront), Docker, Portainer, Nginx, Cloudflare** and **GitHub Actions** for CI/CD.

EDUCATION

RCC Institute of Information Technology	B.Tech (ECE) CGPA: 8.94/10	2019 – 2023
Narendranath Vidyamandir	Higher Secondary (Science) CGPA: 8.22/10	2017 – 2019
Barrackpore Ramakrishna Vivekananda Mission	Secondary (WBBSE) CGPA: 8.77/10	2006 – 2017

PERSONAL PROJECTS

- **FoodGrid (2026):** Designed a **multi-tenant restaurant POS platform** with **QR ordering, KOT workflows, analytics dashboards** and **multi-outlet support**. Backend in **Quarkus**, frontend in **NextJS**. Integrated **Razorpay**.
- **Pocket (2023):** **Personal finance app** detecting transactions from **SMS** using **Kotlin, Jetpack Compose** and **Clean Architecture**.
- **Pathshala App (2020):** **Native Android learning platform** with **branding, content management** and **UPI payments** using **MVVM**.
- **Drive-Safe (2020):** **Accident detection and SOS system** using **Arduino sensors** and **gyroscope data**.

FREELANCING EXPERIENCE

- **Maharashtra Forest Department (2025):** Designed **CMS-driven website** for Thane division with **multi-language** support.
- **Streamliner (2024):** Designed **manufacturing ERP** covering **inventory, billing, PDF invoices**, improving efficiency by **80%**.
- **FitMedik (2021–2022):** **React Native application** integrated with **BLE devices** to monitor health vitals.

ACHIEVEMENTS

Awards: Best Performer Award (Q3 2022, Q4 2023) • **Finalist:** Smart India Hackathon 2022 • **Role:** Domain Head – Android Dev Club
